

## 5. Where do you live?

The habitat of a plant or animal is the place in which it lives, its physical environment, the rocks, soil, plants, water etc. Some habitats can be very small...a rotting log or very large... a grassland area. Small herbivores usually have small habitats while larger carnivores such as eagles need a big area in which to hunt for prey.

Pick 3 plants and 3 animals and see if you can describe their habitat.

### 1. Plant Habitat

Plant	Physical part	Water part	Other plants?	Hungry Herbivores?
Eg. Tree Violet habitat	Usually Rocky ridges	Moist soil under and among the rocks	Other prickly plants such as Sweet Bursaria	Sheep Water Skink Cattle Rabbits

3.				

### 2. Animal Habitat

Animal	Physical part	Water part	Other plants or animals?	Hungry Predators?
Eg. Coxiella	Lake with muddy or sandy bottom.	Not too fresh or salty.	Needs water weeds to eat. Enteromorpha and Ruppia.	Fish, shrimp during the larval stages.
